ABSTRACT (Use "Arial" font, uppercase, Bold, size 10pt)

(1-line spacing here)

The Smart Rivers 2027 Conference will accept papers or an extended abstract. This document contains a detailed guideline for the full paper format of the Smart Rivers 2027 Conference as well as the Extended Abstract option. The format within this document applies to the full paper submittal.

If an author chooses to submit an extended abstract, this template may also be used – but only applies up to the Keywords below (no other Sections will be included in an Extended Abstract). The Extended Abstract option will not contain figures or tables. If there are no changes required to the abstract previously submitted by the author, no additional action is required from the authors, and the original abstract will be used.

Extended abstracts will be limited to 1500 words.

This is an example of the final manuscript. All text will be in "Arial" font, size 10pt, left justified unless otherwise noted. The abstract (of up to 1500 words for an extended abstract, or 500 words for a full paper) should state briefly the purpose of the research, the essential new information, the principal results and major conclusions. The abstract must be able to stand-alone and references to the manuscript should therefore be avoided.

(1 line spacing here)

Keywords: Please list a maximum of 5 keywords

(2 lines spacing here)

1 HEADING (Bold)

Please follow the format described here and demonstrated by example with regard to placement of paper title, length and width of text, and page numbering. These instructions serve as an example for proper manuscript production. The maximum length of full papers for the Smart Rivers 2027 is 10 pages including texts, figures, and tables. (Note: No spacing between paragraphs)

The authors of the accepted abstracts must submit the Full Paper before 30 June 2025 via email to info@smartrivers2025.com. Paper must be submitted in a MS Word document file.

All standard paper components have been specified for three reasons: ease of use when formatting individual papers, automatic compliance to electronic requirements that facilitate the concurrent or later production of electronic products, and conformity of style throughout the paper.

You can delete this sample text and replace it with the text of your paper. However please note that papers must strictly follow this sample, and therefore we strongly recommend you that you keep an initial version of this file for reference.

The template is used to format your paper and style the text. All margins, column width, line spaces, and text fonts are prescribed; please do not change them.

(1 line spacing here)

2 HEADING

Type the title of the paper in 12pt boldface and in upper case. Authors' names are set in 10pt and in upper case. Use format SMITH, JOHN. A. for author names. Affiliation and contacts are in 8pt italics.

(1 line spacing here)

3 HEADING

(1 line spacing here)

3.1 Headings

The Heading 1 should be set in 10pt "Arial" boldface, with a leading (interline spacing) of 10pt and a single spacing of respectively, before and after.

The Heading 2 should be set in 10pt "Arial" regular face, with a leading (interline spacing) of 10pt and a single spacing.

3.1.1 Third level headings

The third level headings should in 10pt "Arial" italic face, with a leading (interline spacing) of 12pt and a spacing of 6pt before and after.

3.2 Body of texts

The normal texts should be set in 10pt "Arial" with a leading (interline spacing) of 10pt and a single spacing. Lines are single-spaced. The paragraphs should be justified at left and right margins of the text.

4 HEADING

4.1 Equations

Equations should be centered and numbered consecutively, as in Eq. [1]. An alternative method is given in Eq. [2] for long sets of equations where only one referencing equation number is wanted.

(1 line spacing here)

$$F((A - b_n)^2, c_n^2, D) = \frac{1}{(23\pi)^{1/3}} \int \frac{d^3 b_n}{3\omega_1} \delta^4(A - b_n - D + c_n) \quad [1]$$

(1 line spacing here)

where,

$$A = \begin{bmatrix} E_{11} & E_{12} & *E_{21} & *E_{22} \\ E_{12} & E_{13} & *E_{22} & *E_{23} \end{bmatrix} \quad [2]$$

4.2 List

Lists can be provided using either numbers or bullets:

- i. List item 1 like this;
- ii. List item 2 is an example of a longer list item that wraps to a second line, where the second line is indented.

The example for bulleted items like this:

- List item 1;
- List item 2.

4.3 Tables and Figures

Tables and figures should appear in one column of a page and be numbered consecutively. Figures and texts may appear on the same page, and a centered caption should appear directly beneath the figure. It is preferable that figures be mounted in portrait style and figure captions are no longer than two lines. On figures showing graphs, both axes must be clearly labeled (including units if applicable).

Tables should be designed to have a uniform style throughout the paper, following the style shown in Table 1.

Table 1. Caption heading for a table should be placed at the top of the table and within table width.

	A	B	C	D
A	Aa	Ab	Ac	A _d
B	Ba	Bb	Bc	B _d
C	Ca	Cb	Cc	C _d
D	Da	Db	Dc	D _d
E	Ea	Eb	Ec	E _d

Authors are advised to prepare their figures in either black and white or color. Please prepare the figures in high resolution (300 dpi) for half-tone illustrations or images. Pictures must be sharp enough otherwise they will be rejected. Figures must be originals, computer-generated or drafted, and placed within the text area where they are discussed. Figure 1 shows one example.

Figure 1. The caption heading for a figure should be placed below the figure and within figure/illustration width.

4.4 Footnotes

Footnotes are denoted by a character superscript in the text¹.

4.5 Units

Use of either SI (MKS) or English units are accepted. Avoid combining SI and English units. This often leads to confusion because equations do not balance dimensionally. If you must use mixed units, clearly state the units for each quantity that you use in an equation. Do not mix complete spellings and abbreviations of units. Spell out units when they appear in text.

5 CONCLUSIONS

If the formatter still needs to create a component which is not prescribed here, please incorporate applicable criteria that follow the styles provided (e.g., spacing and typeface).

ACKNOWLEDGEMENTS

This is where one acknowledges funding bodies, etc. Note that section numbers are not required for Acknowledgements and References.

We appreciate the cooperation and efforts of all authors in producing the Proceedings.

REFERENCES

References should appear together at the end of the paper, listed alphabetically by last name of the first author. Thereafter sorting is made by co-authors and year. However, in the text, sorting is done by year (Don et al., 2005; Gran, 1992). References in the text consist of the author name and publication year in parentheses, as found in Don et al. (2005). If several references are cited collectively, they are enclosed on parentheses with no additional parentheses around dates. All references listed should be cited in the text. Example reference citations are provided at the end of this paper. **Here are examples:**

- Dong, N.C., Araki, H., Yamanishi, H., and Koga, K. (2005). Simulation of groundwater flow and environmental effects resulting from pumping. *Environmental Geology*, 47 (3), 361-374.
- Donelan, M.A. (1978). Whitecaps and momentum transfer. *NATO Conf. on Turbulent fluxes through the sea surface, wave dynamics, and prediction*, Ed. A. Favre and K. Hasselmann, Plenum, NY, 273-287.
- Gran, S. (1992). *A course in ocean engineering*. Elsevier, 583 pp.
- Hwang, P.A., Hsu, Y.H.L. and Wu, J. (1990). Air bubbles produced by breaking wind waves: a laboratory study. *J. Phys. Oceanography*, 20, 19-28.
